Access Database Query Exercise

Advanced Queries Exercise 4 – make a table called Advanced Query Exercise 4. Save all your work.

1. Create a table called "Late Video Fees". Make a summary query to total the customer's deficit by name. Save as Video Fees Query.

Name	Date	Amount
Tim Foley	3/12/2003	$12.50
Tina Maple	3/13/2003	$15.10
Tina Maple	3/14/2003	$13.10
Ralph Rudolph	3/15/2003	$15.10
Ralph Rudolph	3/15/2003	$13.10
Tim Foley	3/15/2003	$15.10
Charles Richards	3/15/2003	$25.00
Francis Saws	3/15/2003	$52.00
Matt Davis	3/16/2003	$15.10
Charles Richards	3/16/2003	$13.10
Ralph Rudolph	3/16/2003	$14.10
Tim Foley	3/16/2003	$15.10
Matt Davis	3/16/2003	$16.10

2. Create a second query in using the Design View to list the name of the student and how many times they borrowed money. Save as Times Late Query.

3. Create a second table listing the wares in your kitchen. The field names should be item, quantity and replacement cost. What is the total cost of replacing your material goods by item?

4. Create a query that has the following information. Place the Item as the row heading and the Cost Range as the column heading.

Value table:

Item	Quantity	Cost Range
Plates	12	$15.00
Bowls	12	$5.00
Cup	12	$5.00
Saucer	12	$2.00
Knife	20	$3.00
Fork	20	$3.00
Spoon	20	$3.00
Glass	10	$10.00
Serving Platter	3	$35.00
Serving Bowl	2	$25.00

5. Create a query to see the above table by typing in the item name.
