Name:
Date: $\qquad$

1. Calculate V1 for $30 \%$ and $40 \%$ concentration of dextrose. Plot the four points and draw the two lines, one
for 30\% stock dextrose and one for $40 \%$ stock dextrose.

| Stock Concentration (C1) | Volume Required (V2) | Concentration Required (C2) | Stock Required (V1) |
| :---: | :---: | :---: | :---: |
| $30 \%$ | 50 ml | $10 \%$ |  |
| $30 \%$ | 1000 ml | $10 \%$ |  |
| $40 \%$ | 50 ml | $10 \%$ |  |
| $40 \%$ | 1000 ml | $10 \%$ |  |

2. Determine the amount of stock dextrose to make the required volume of $10 \%$ dextrose (C2). On the bottom of the graph locate the volume (V2) needed of $10 \%$ dextrose. Follow that point vertically to the sloped line representing the stock concentration (C1). Go to the left to determine the amount (V1) in ml required.

| Volume Required | Stock Concentration | Amount of Stock (ml) |
| :---: | :---: | :---: |
| 250 ml | $30 \%$ |  |
| 800 ml | $30 \%$ |  |
| 300 ml | $40 \%$ |  |
| 850 ml | $40 \%$ |  |

3. Calculate the following for 8.5 percent dehydration and plot two points for the patient's weight and total volume on the chart by drawing a sloped line between the two points.

| Patient weight | Replacement Volume | Maintenance Volume | Total Volume |
| :---: | :--- | :--- | :---: |
| 5 lbs |  |  |  |
| 100 lbs |  |  |  |

4. Determine the total fluid volume for the following patients weighing between 5 and 100 pounds. Find the patient's weight and go vertically to the sloped line representing the percent of dehydration. Record the total fluid volume in milliliters from the horizontal line.

| Patient's Weight | \% Dehydration | Total Fluid Volume (ml) |
| :---: | :---: | :---: |
| 15 lbs | $8.5 \%$ |  |
| 25 lbs | $8.5 \%$ |  |
| 35 lbs | $8.5 \%$ |  |
| 45 lbs | $8.5 \%$ |  |
| 60 lbs | $8.5 \%$ |  |
| 75 lbs | $8.5 \%$ |  |
| 90 lbs | $8.5 \%$ |  |

## Vet Tech Mathematics

## Mean, Median and Mode

We measure the dog's weight in pounds for the $\mathbf{2 0}$ dogs in our kennel.

| 69 | 85 | 70 | 71 | 92 | 74 | 93 | 81 | 82 | 96 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 90 | 91 | 84 | 79 | 89 | 94 | 97 | 86 | 82 | 77 |

5. Order the data
6. What is the range?
7. What is the mean, median and mode
8. What is the percentage of the dogs that weigh less than 86 lbs?
9. What is the percentage of the dogs that weigh more than 90 lbs?

We have collected temperature data (in degrees Celsius) on the dogs in the kennel. There are 20 dogs. Order the data from smallest to largest. Find the mean, median, mode and range for the data.

| 37.2 | 38.3 | 38.9 | 37.4 | 38.2 | 37.3 | 38.1 | 38.4 | 38.6 | 37.7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 37.6 | 37.9 | 38.2 | 38.7 | 38.4 | 38.1 | 38.8 | 37.9 | 38.9 | 39.2 |

10. Order the data
11. What is the range?
12. What is the mean, median and mode?
